

KMC10

Wireless Door / Window Contact

Regardless of the application, the compactly designed KMC10 wireless door/window contact should be every installer's first choice for tough-to-fit installations.

Regardless of the application, the compactly designed KMC10 wireless door/window contact should be every installer's first choice for tough-to-fit installations. Its streamline profile and new design allows for double-sided tape mounting. These features work together to help get installers in and out of jobs faster than ever before.

Product Features:

- Reliable 868 MHz technology
- 1 pre-installed lithium battery with activation pull tab (included)
- 16 mm (5/8") maximum magnet gap
- Smooth-back plastics to apply doubled-sided tape (included)
- Case and wall tamper (without using any mechanical springs)
- PCB antenna
- PCB mounted on the cover for easy installation
- Built-in reed switch
- Normally closed external contact input
- CE and RoHS compliant

KMC10

Wireless Door / Window Contact

Quicker Installations

The KMC10 features a pre-installed battery that is activated by installers through a pull tab. This helps reduce installation time as casings don't need to be opened for battery insertion. Simply draw the activation pull tab and mount the contact. To help further simplify the installation process, Bentel has placed the PCB on the contact's cover. If you prefer to mount the contact using screws (recommended when using the wall tamper option), the new design does not require the removal of the PCB to do so.

Dependable & Versatile

The KMC10 is designed for dependable case-tamper or wall-tamper detection. It will send a signal to the alarm system if either its casing is opened or if it is forcibly removed from a wall. If the alarm system is armed when this occurs, an alarm will be activated and the central station will be notified of the violation (if programmed to do so).

The KMC10 also features an external contact input that allows a standard hardwired contact to be connected to it. This is useful for installations where it is difficult to mount the magnet within the maximum allowable gap of the contact (16 mm (5/8")).

Value Added

Significantly smaller than many door/window contacts, the KMC10 is housed within a compact casing that allows it to be used for the tightest-fitting installations. Once installed, the contact is inconspicuous and complements the décor of most homes. It is built with reliable 868 MHz technology, uses a long-life lithium battery and is compatible with all current Bentel wireless receivers at 868 MHz.

Ordering Information

KMC10 Wireless Door/Window Contact

Compatibility

The KMC10 is compatible with the following receiver:
Wireless Receiver VRX32-868

Specifications

Dimensions.....	75 mm x 31 mm x 22 mm (2 9/10" x 1 1/2" x 7/8")
Battery	CR2 (3V Lithium)
Battery Life	5-8 Years (Typical)
Operating Temperature	0 to 49°C (32 to 120 °F)
Operating Humidity	5-93% RH
